

ENCE 355 – Introduction to Structural Design
SOLUTIONS to Homework Set No. 8
Fall 2002

PROB 9-11

(7/60)

$$d = 22" - 1.5" - 0.5" - \frac{1.27}{2} = 19.37"$$

$$c_b = \frac{87000}{87000 + f_y} (d) = \frac{87}{147} (19.37)$$

$$c_b = 11.46"$$

SINCE 2 OF THE #10 LONGITUD. BARS ARE LOCATED JUST 0.46" FROM THE STRAIN N.A., THEY WILL BE NEGLECTED IN THE ANALYSIS.

$$\epsilon_s' = \frac{8.83}{11.46} (0.003) = 0.0023$$

$$0.0023 > 0.00207 \therefore f_s' = f_y$$

$$P_b = C_1 + C_2 - T$$

(SUBTRACT FORCE IN DISPLACED CONCRETE FROM C_2)

$$C_1 = 0.85 (2) (9.74) (14) = 529.9 \text{ K}$$

$$C_2 = 3.81 (60 - 4(0.85)) = 215.6 \text{ K}$$

$$T = 60 (3.81) = 228.6 \text{ K}$$

$$\therefore P_b = 517 \text{ K}$$

FIND c_b BY SUMMING MOMENTS ABOUT T:

$$P_b (c_b + 8.37) = C_1 (14.50) + C_2 (16.73)$$

$$517 (c_b + 8.37) = 529.9 (14.50) + 215.6 (16.73)$$

$$c_b = 13.47"$$

$$\phi P_b = 0.70 (517) = 362 \text{ K}$$

PROB #2-1

1. $u = (1.4)(1200) = 1680 \text{ lbs/ft}$

2. $u = (1.2)(1200) + (1.6)(720) = 2592 \text{ lbs/ft} \leftarrow$

3. $u = (1.2)(1200) + (0.5)(720) = 1800 \text{ lbs/ft}$

4. $u = (1.2)(1200) + (0.5)(720) = 1800 \text{ lbs/ft}$

5. $u = (1.2)(1200) + (0.5)(720) = 1800 \text{ lbs/ft}$

6. $u = (0.9)(1200) = 1080 \text{ lbs/ft}$

7. $u = (0.9)(1200) = 1080 \text{ lbs/ft}$

$u = 2592 \text{ lbs/ft}$
